Honda Marine Innovation

Like us, Honda have always been passionate about new technologies. By constantly pushing the boundaries of what is possible, Honda are able to give you more. More performance, more fuel efficiency, more control. Take a look at their latest innovations to see why together, we make the perfect partnership.

POWERED by
HONDA™

All our Honda engines are the lightest and most compact in their class, deliver reliable power wherever you go. This outstanding range of 4-stroke engines feature a host of innovative Honda technologies:

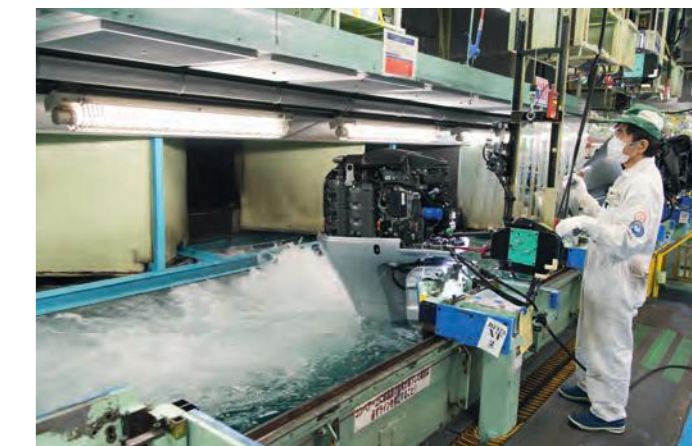

VTEC*	BLAST	Programmed Fuel Injection PGM-FI	Honda Programmed Ignition PGM-IG	ECOMO	Remote Control**
					
Multi Function Tiller Handle**	Electric Start	Power Trim & Tilt	Engine Protection & Security	NMEA2000	Through Hub Exhaust
					

*Only available on BF100/90. **Available on specific models.

4-stroke

In 1964, Honda were the first manufacturer to make all their marine engines 4-stroke, because they were quieter and cleaner than the existing 2-stroke technology. They have continued to develop and innovate their world renowned range over the last 54 years, creating a line-up from 2.3 to 250 hp, all of which produce outstanding performance, efficiency and reliability.

Tried and tested

Open water is one of the toughest environments on the planet, which is why Honda technologies and innovations are tried, tested, then tested again.

The images used in this brochure were captured in the Netherlands. In the UK, it is important to ensure that when you are out on the water you have lifejackets and buoyancy aids on board for every passenger to ensure that you are fully prepared for any situation.
